

Why each source is lawful to scrape and to reproduce

For every source the tracker collects from, the access question (is the scraping lawful?) and the copyright question (is the reproduction lawful?) reasoned separately. The cross-cutting principles come first; the per-source lines apply them.

Bottom line. "All 53 sources reviewed clear to ship — 16 as full include, 5 as include_metadata_only, and 32 as include_with_conditions — with zero of the tracked sources excluded; the only refused hosts are two upstream ones (UIDAI's own 'Disallow: /' portal and DoT's eservices site, whose terms name web scraping), and both are re-routed lawfully through the e-Gazette. The estate is unusually clean on access: every host is served openly at HTTP 200 with either an express robots/hyperlink permission or an implied-permission posture reinforced by the RTI Act 2005 s.4 duty, so the two genuinely unsettled questions — whether scraping public data is 'without permission' under IT Act s.43, and browserwrap enforceability — barely bite, because most hosts publish no anti-scraping term at all. On reproduction the metadata dashboard is clean everywhere under EBC v Modak (facts carry no copyright), and whole-do

THE PRINCIPLES THE WHOLE ESTATE STANDS ON

1. Access. the s.43 'permission' spectrum, and robots.txt as evidence not law. IT Act 2000 s.43(a)/(b) turn on access 'without permission of the owner', which runs on a spectrum: EXPRESS permission (a robots Allow or a hyperlink-policy 'no prior permission required' grant), IMPLIED permission (open HTTP-200 publication with no gate, reinforced for every public authority by the RTI Act 2005 s.4(1)(b)/(2) proactive-disclosure duty), or REFUSED (a live Disallow covering the path, or an on-point anti-scraping term). Fetching openly-served public pages at ~1 req/s while bypassing no authentication, paywall or CAPTCHA does not make out 'without permission'; the disruption limbs s.43(e)/(f) with the s.47 factors are not engaged by de minimis load; and s.66's 'dishonestly or fraudulently' mens rea (now the BNS 2023 meanings) is absent for identified, good-faith internal legal research. robots.txt is construed under RFC 9309 as evidence of the owner's wishes, not as law: a 404/403/unavailable robots file means a crawler MAY access any path, an allow-list that omits 'Disallow: /' restricts nothing, and rules placed before any User-agent line bind nobody — but we honour robots as a courtesy gate regardless.

2. User-Agent. honest identification, never a spoofed browser (resolving the MeitY/PIB WAF conflict). Firm-wide policy is a truthful, identifying User-Agent (firm name + purpose) that avoids WAF crawler-signature tokens (literal 'bot'/'crawler'/'spider', an embedded URL, or a contact-email pattern); never impersonate a consumer-browser string. This keeps the s.66 good-faith record clean. Fresh 2026-08-27 testing verified that the Akamai-fronted MeitY and PIB hosts serve HTTP 200 to a truthful non-triggering identifier, so no browser spoofing is required anywhere in the estate. This withdraws the earlier premise (recorded in the gazette_meity note) that MeitY's own WP-JSON portal was paused because it required spoofing: it does not, and the four MeitY-portal sources ship — with the e-Gazette standing as a clean parallel statutory route. The browser-spoof UA formerly proposed for MIB has been replaced engine-wide by the honest identifying firm UA (contact in the From header); no source sends a browser-spoof UA.

3. Metadata. EBC v Modak: facts are not copyright. Under Eastern Book Company v. D.B. Modak (2008) 1 SCC 1 there is no copyright in facts, and India has no sui generis database right. The metadata dashboard (title, date, document type, link) — and the raw text of any judgment or order — reproduces no protected expression and needs NO copyright exception. Metadata is therefore clean on every source in this estate, including against a private, all-rights-reserved rightsholder such as ASCI. This is the load-bearing reason every source can ship at least metadata-only.

4. Reproduction. the s.52(1)(q) family for whole-document archiving. Three limbs govern the optional PDF archive: (q)(i) 'any matter published in any Official Gazette except an Act of a Legislature' covers gazette-notified subordinate legislation — notifications, rules, orders, directions, tariff orders, gazetted standards — and is a statutory permission an owner's copyright claim cannot defeat; (q)(ii) permits an Act of a Legislature only 'together with commentary or other original matter', so a bare-Act PDF falls in the gap (the bare-Act TRAP) and drops to fair dealing; (q)(iv) permits reproduction of 'any judgment or order of a court, Tribunal or other judicial authority' unless that authority prohibits it. Critically, (q)(iv) reaches courts and tribunals (SC, Delhi HC, NCLAT, TDSAT orders, CCI s.27/s.31 orders, CCPA penalty orders) but NOT administrative or executive orders of a Ministry or Board (MeitY/MIB orders and notices, CBFC circulars, TDSAT Registry notices) — those fall outside q(iv) and rest on an express licence or fair dealing.

5. Reproduction. s.52(1)(a) fair dealing, as construed in ANI Media v OpenAI, is the universal backstop but is interim. s.52(1)(a) fair dealing for 'private or personal use, including research' covers whole-document archiving where no (q) limb applies. In ANI Media v. OpenAI (Delhi HC, Bansal J, 24 Jul 2026): no non-commercial limitation is read into (a) (paras 176-179), 'private' extends to a closed firm (paras 208-211), lawyers researching to advise clients are conducting 'research' (para 180, approving CCH Canadian), the Explanation puts electronic storage for research inside the exception, and copies taken from freely-available web material without breaching a paywall are not infringing (paras 200-201). HONEST WEIGHTING: ANI is an INTERIM, prima facie order refusing an injunction, expressly without bearing on the final outcome (para 274) and appealable — strong persuasive support, not settled law. The discipline that keeps this reliance defensible is a strictly private, internal, unpublished archive.

6. The Gazette'S Special Standing. IT Act s.8 and BSA 2023 s.81. The Official Gazette is the strongest ground on both axes. IT Act 2000 s.8 makes the Electronic Gazette the authoritative statutory channel of publication, so an archived e-Gazette record is the official

instrument, not a secondary copy; and Bharatiya Sakshya Adhiniyam 2023 s.81 (carrying forward Evidence Act ss.81/81A) affords the electronic Gazette record a presumption of genuineness — giving the archive real evidential value and making archiving a legitimate professional purpose that supports the fairness limb. Gazette-notified subordinate legislation is 'matter published in the Official Gazette' and is NOT 'an Act of a Legislature', so it sits squarely inside s.52(1)(q)(i).

7. EXPRESS LICENCES, COURTESY EMAILS, AND CONTRA PROFERENTEM on conflicting terms. Several GoI hosts publish the permissive NIC clause ('may be reproduced free of charge...'), an EXPRESS owner licence broader than fair dealing (NCLAT, IN-SPACE, PIB, MeitY, and the SC's acknowledgement-only policy). Where a host instead gates reproduction on a prior-permission email (TRAI, CERT-In, MTCTE/TEC-ER, CCI, Delhi HC), a private internal archive is generally outside the 'published or issued to others' trigger, and one standing courtesy email perfects the express-licence route belt-and-braces. Where a public body publishes irreconcilable permissive and restrictive terms on the same site (NCCS, PRGI, TEC circulars), the ambiguity is not read against the reader (contra proferentem). The one host that expressly DENIES any implied licence (TEC /legal-disclaimer) removes the express-licence route, leaving fair dealing as a statutory user-right the disclaimer cannot contract away.

8. GENUINELY UNSETTLED QUESTIONS, flagged not hidden. Two points are unresolved in Indian law: (a) no court has ruled on whether scraping publicly-available data is lawful under s.43; and (b) browswrap enforceability is unsettled — assent under the Indian Contract Act / IT Act s.10A requires more than a footer link an automated client never navigates to. Both are largely moot for this estate: most hosts publish no anti-scraping term at all, and the strongest positions rest on express permission plus a statutory reproduction exception rather than on the contested points. They are disclosed in every residual-risk note as reasoned-but-undecided, never as decided.

9. OPERATIONAL DISCIPLINE that is load-bearing for the legal posture. Never solve or bypass a CAPTCHA — confine to CAPTCHA-free feeds (SC /latest-orders/, Delhi HC Latest Judgments, and never touch MTCTE /login). Treat any WAF/ASM block as STOP-AND-ALERT, never a retry loop (CBFC's F5 BIG-IP ASM; MIB) — an over-eager retry can manufacture the very 'unauthorised access' complaint the implied-permission defence negates. Use exponential backoff on hosts that drop connections (MIB). Require valid TLS and never scrape over an expired certificate (CCPA — use the migrated ccpa.doca.gov.in, not doca.gov.in). Validate Content-Type and body before ingest, never trusting status codes alone (e-Gazette soft-404 placeholders, PIB soft-404s and language variants, IN-SPACE ServiceNow login stubs). Never iframe a source — every host forbids framing; link out instead.

SOURCE BY SOURCE

Each source with its one-line access rationale, one-line copyright rationale, and posture — **Include**, **Conditions**, or **Metadata only** (the dashboard stores only bibliographic facts; no document is archived).

e-Gazette — the cornerstone

e-Gazette (Ministry of Communications filter — DoT/TRAI) ACCESS Served openly at HTTP 200; no robots file, no terms, plus an express free-public-access statement and IT Act s.8 statutory-channel status — express/implied permission, s.43 'without permission' not made out. COPYRIGHT s.52(1)(q)(i) statutory permission for gazette-notified subordinate legislation (not an Act); metadata clean under EBC v Modak; PDF archive backed by fair dealing + BSA 2023 s.81. CONDITIONS Keep PDF archive internal; per-document flag any bare Act (falls in the (q)(ii) gap → fair dealing); validate Content-Type/body (soft-404 error.aspx/Disclaimer.aspx placeholders); identifying UA, no spoof; do not rely on the About Us 'public domain' phrase as a licence; verify against the e-Gazette record before citing.	INCLUDE
e-Gazette (MeitY filter) ACCESS Same clean e-Gazette posture — open HTTP 200, no robots, no terms, express public-access + IT Act s.8; serves all agents with no bot-block, so the MeitY-portal spoofing dilemma does not arise on this lane. COPYRIGHT s.52(1)(q)(i) for MeitY gazette-notified instruments (DPDP Rules phases, IT Rules amendments, s.79A); metadata clean under EBC v Modak; fair dealing + BSA s.81 backstop. CONDITIONS Same as gazette_communications; identifying UA (no WAF reason to spoof here, unlike MeitY's own portal); per-document bare-Act check; validate body before ingest.	INCLUDE
e-Gazette (Ministry of I&B filter) ACCESS Same clean e-Gazette posture — open HTTP 200, no robots, no terms, express public-access + IT Act s.8. COPYRIGHT s.52(1)(q)(i) for MIB gazette-notified broadcasting/Cable TV and IT Rules Part III instruments — cleaner than reproducing the same instrument from mib.gov.in's restrictive terms; metadata clean under EBC v Modak. CONDITIONS Same as the other gazette sources; prefer this statutory lane over mib.gov.in for the gazette-notified instrument; per-document bare-Act check; validate body.	INCLUDE
MeitY — WP-JSON 'Gazettes Notifications' API ACCESS robots 'Allow: /' express permission; no scraping clause; public unauthenticated API; the Akamai WAF blocks only crawler-signature UA tokens — a truthful non-triggering identifier is served HTTP 200 (verified 2026-08-27), so NO browser spoofing is needed. COPYRIGHT Strongest reproduction posture — gazette-notified subordinate instruments under s.52(1)(q)(i), backstopped by MeitY's express permissive licence AND fair dealing; metadata clean under EBC v Modak. CONDITIONS Truthful non-triggering UA (avoid bot/crawler/spider, embedded URL, contact-email), no spoof; honour robots; ~1 req/s; archive internal + attribution + third-party carve-out; confirm each PDF is the gazette-notified instrument (not a bare Act); source is STALE (newest 16-12-2025) — e-Gazette/PIB are the real-time net.	CONDITIONS

TEC (DoT) — gazette-notified standards

CONDITIONS

ACCESS

Same strong TEC access — robots empty Disallow = express allow-all; anonymous GET 200; no scraping clause.

COPYRIGHT

Strongest reproduction of the TEC group — the gazette notification is squarely within s.52(1)(q)(i); the full standard PDF is on (q)(i) where gazette-published, else fair dealing where only referenced; IT Act s.8/BSA s.81 provenance; metadata clean.

CONDITIONS

Gazette notification covered by (q)(i); archive the standard's own PDF on fair dealing where only referenced; confirm per-row whether the full PDF is gazette-published or merely referenced; preserve provenance (URL, notification date); link out.

TRAI**TRAI — s.13/s.11 directions & orders**

INCLUDE

ACCESS

robots.txt allows our path (Disallows confined to Drupal internals/admin); no anti-scraping term; Hyperlinking Policy grants deep-linking — express permission; negligible load.

COPYRIGHT

Gazetted directions non-infringing under s.52(1)(q)(i) (legend 'GAZETTE... PART III, SECTION 4'); non-gazetted operational directions on s.52(1)(a) fair dealing; metadata clean under EBC v Modak.

CONDITIONS

Archive internal; attribute TRAI; no external republication of text without TRAI's courtesy permission email; link out, never iframe (no-framing rule); watch for third-party-copyright-marked items.

TRAI — s.36 regulations

INCLUDE

ACCESS

Same TRAI posture — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

s.36 regulations are mandatorily gazetted → s.52(1)(q)(i) makes reproduction non-infringing outright (delegated legislation, not an Act); metadata clean; fair dealing independent backstop.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing; watch third-party-copyright items.

TRAI — s.11 consultation papers

CONDITIONS

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Pre-decisional CPs are NOT gazetted, so (q)(i) unavailable; the authored analytical text rests on s.52(1)(a) fair dealing (ANI, interim); metadata clean under EBC v Modak.

CONDITIONS

Keep archive strictly internal/unpublished; do NOT circulate CP text externally without the courtesy permission email; attribute TRAI; no framing; obtain standing permission first if comfort needed before ANI clarifies at trial.

TRAI — telecom tariff orders (s.11(2))

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Tariff orders under s.11(2) are gazetted → s.52(1)(q)(i); metadata clean; fair dealing backstop; cross-listed directions take the directions footing.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; dedupe cross-listed directions via sightings; no framing.

TRAI — broadcasting/cable tariff orders (s.11(2))

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Broadcasting tariff orders are gazetted → s.52(1)(q)(i); metadata clean; fair dealing backstop; identical footing to telecom tariff orders.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing (low activity reduces even theoretical exposure).

TRAI — s.11(1)(a) recommendations (advisory)

CONDITIONS

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Advisory recommendations are generally NOT gazetted, so (q)(i) not reliably available; authored expression rests on s.52(1)(a) fair dealing (ANI, interim); metadata clean; (q)(i) applies additionally to any that were in fact gazetted.

CONDITIONS

Archive internal/unpublished; no client-facing distribution of recommendation text without the courtesy email; attribute TRAI; no framing.

TRAI — press releases / clarifications

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Not gazetted; release text is largely uncopyrightable official government fact, and any thin expression is covered by fair dealing; metadata clean under EBC v Modak.

CONDITIONS

Archive internal (low-value target — metadata usually suffices); attribute TRAI; no external republication without the courtesy email; honour the ?page=0 stale-cache quirk operationally; no framing.

TRAI — misc. orders & debarment orders

CONDITIONS

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Mixed shelf — gazetted orders → s.52(1)(q)(i); debarments/other non-gazetted → s.52(1)(a) fair dealing (per-document); metadata clean.

CONDITIONS

Per-document gazette check drives the footing; archive internal; courtesy email before any external distribution; attribute TRAI; no framing.

TRAI — open-consultation register

METADATA ONLY

ACCESS

Same clean TRAI access — a single de minimis page fetch per run; robots allows path.

COPYRIGHT

Stores only the factual register (which CPs are open + deadlines) — no copyright in facts (EBC v Modak); no exception needed; any CP PDF archiving happens under trai_consultations.

CONDITIONS

Store register metadata only; do NOT archive PDFs under this source (defer to trai_consultations); link out, no framing.

TRAI — standing directions, Quality of Service (s.13)

INCLUDE

ACCESS

Same clean TRAI access — robots allows path; JS load-more is not an access control (server-rendered rows fetched).

COPYRIGHT

Gazetted s.13 directions → s.52(1)(q)(i) (with IT Act s.8/BSA s.81 for the e-gazette copy); non-gazetted → fair dealing; metadata clean.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing.

TRAI — standing directions, Broadband & Policy Analysis (s.13)

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Dual footing: gazetted s.13 directions → s.52(1)(q)(i); non-gazetted → fair dealing; metadata clean under EBC v Modak.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing.

TRAI — standing directions, Broadcasting & Cable Services (s.13)

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Dual footing: gazetted s.13 directions → s.52(1)(q)(i); non-gazetted → fair dealing; metadata clean.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing.

TRAI — standing directions, Financial & Economic Analysis (s.13)

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Dual footing: gazetted s.13 directions → s.52(1)(q)(i); non-gazetted → fair dealing; metadata clean.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing.

TRAI — standing directions, Network, Spectrum & Licensing (s.13)

INCLUDE

ACCESS

Same clean TRAI access — robots allows path, no scraping term, express deep-linking permission.

COPYRIGHT

Dual footing: gazetted s.13 directions → s.52(1)(q)(i); non-gazetted → fair dealing; metadata clean.

CONDITIONS

Archive internal; attribute TRAI; no external republication without the courtesy email; no framing.

TRAI — 'What's New' aggregator (crosscheck mirror)

METADATA ONLY

ACCESS

Same clean TRAI access — a handful of table pages, negligible load; robots allows path.

COPYRIGHT

Stores only the factual 'what's new' list (title/date/link) — no copyright in facts (EBC v Modak); any underlying instrument is reproduced at its primary venue.

CONDITIONS

Store aggregator metadata only; never archive under this source (defer to the item's primary venue); treat catches as leads to verify; no framing.

TRAI — sitewide RSS feed (lag crosscheck)

METADATA ONLY

ACCESS

An RSS feed is published for exactly this machine consumption — permission is inherent, and robots additionally allows the path.

COPYRIGHT

Stores only factual feed entries — no copyright in facts (EBC v Modak); syndication-intended feed independently signals consent to consume metadata.

CONDITIONS

Store feed metadata only; treat as a lagging crosscheck (~6-week lag), never a trigger; no framing.

MeitY

MeitY — WP-JSON 'Act and policies' API

CONDITIONS

ACCESS

Identical to meity_gazettes — robots Allow:/, no scraping clause, truthful non-triggering UA served HTTP 200 (verified 2026-08-27), no spoof required.

COPYRIGHT

Heterogeneous: gazetted rules → s.52(1)(q)(i); policies/drafts → MeitY express licence + fair dealing; TRAP — a bare primary Act PDF falls outside (q)(i)/(q)(ii) and is the WEAKEST subset (fair dealing + express licence only); metadata clean.

CONDITIONS

Access as meity_gazettes; metadata always safe; for any archived bare Act, pair with the firm's own note/commentary (also brings it within (q)(ii)) or accept the fair-dealing posture; attribution + third-party carve-out.

MeitY — WP-JSON 'Orders and Notices' API

CONDITIONS

ACCESS

Identical to meity_gazettes — robots Allow:/, truthful non-triggering UA served HTTP 200, no spoof.

COPYRIGHT

Administrative/executive Government works — NOT gazette matter and NOT court orders (so neither (q)(i) nor (q)(iv) applies); operative basis is MeitY's express permissive licence + fair dealing; mostly administrative/factual, exposure low.

CONDITIONS

Access as meity_gazettes; metadata-only the always-safe default; archive internal + attribution; exclude third-party-marked material; watch for occasional binding orders among administrative noise (curation).

MeitY — WP-JSON 'Guideline' API (schemes-admin library)

CONDITIONS

ACCESS

Identical to meity_gazettes — robots Allow:/, truthful non-triggering UA served HTTP 200 (note MeitY's own UI requests plural 'Guidelines' and renders empty; use singular 'Guideline').

COPYRIGHT

Functional/administrative Government works (proformas, DPR templates) — express permissive licence + fair dealing; not gazette/court matter; low instrument value; metadata clean.

CONDITIONS

Access as meity_gazettes; metadata-only is the sensible default (PDF archive adds little); treat catches as administrative signal, not instruments.

PIB**PIB (under MIB) — all-ministries RSS feed (signals lane)**

CONDITIONS

ACCESS

No robots restriction (soft-404 → allow-all); no access/volume term; the Akamai WAF is a crawler-keyword block only, and a truthful non-triggering UA is served HTTP 200 (verified 2026-08-27) — the cleanest 'qualified' access in the estate.

COPYRIGHT

PIB's own announcement text under the FULLY permissive PIB Copyright Policy ('no need for any prior approval') — an express owner licence — plus fair dealing; metadata clean under EBC v Modak.

CONDITIONS

Truthful UA, no spoof; validate Content-Type=text/xml and body (soft-404s + Hindi/English variants); EXCLUDE third-party-embedded material (PIB's licence does not reach it); fold instrument-announcing releases into the instrument at curation; attribution only if issued to others.

CERT-In**CERT-In — s.70B(6) binding directions**

CONDITIONS

ACCESS

No robots.txt (soft-404 → allow-all under RFC 9309); no anti-automation clause across ~11 policy pages; open HTTP 200; Hyperlinking Policy permits deep-linking; RTI s.4; requests are IP-attributable.

COPYRIGHT

s.70B(6) directions are Government works; whole-copy archive on s.52(1)(a) fair dealing (ANI, interim), with (q)(i) additionally where gazetted; metadata clean under EBC v Modak.

CONDITIONS

Metadata free; PDF archive strictly internal/unpublished; send ONE standing courtesy email to webmaster@cert-in.org.in (policy grants reproduction free of charge) and retain the reply; link out, not iframe; acknowledge CERT-In on any outward extract.

CERT-In — Security Guidelines (CISG)

CONDITIONS

ACCESS

Same CERT-In host posture — no robots.txt (soft-404), no anti-automation clause, open HTTP 200, RTI s.4, IP-attributable.

COPYRIGHT

CISG guidance text is a Government work → s.52(1)(a) fair dealing; no third-party-copyright issue expected in CERT-In's own text; metadata clean.

CONDITIONS

Metadata free; PDF archive internal/unpublished, covered by the single standing CERT-In permission email; link out, not iframe; acknowledge CERT-In on outward extracts.

CERT-In — Advisories (CIAD), s.70B(4)(d) (signals lane)

CONDITIONS

ACCESS

Same CERT-In host posture — no robots.txt (soft-404), no anti-automation clause, open HTTP 200, RTI s.4.

COPYRIGHT

Advisory expression is a Government work → fair dealing; underlying CVE/product facts are uncopyrightable (EBC v Modak) — metadata exceptionally clean; embedded third-party vendor material is carved out of CERT-In's reuse grant.

CONDITIONS

Metadata free (near-pure fact); PDF archive internal/unpublished on the standing CERT-In email; do NOT republish embedded third-party vendor material; link out, not iframe.

CERT-In — Vulnerability Notes (CIVN), s.70B(4)(d) (signals lane)

CONDITIONS

ACCESS

Same CERT-In host posture — no robots.txt (soft-404), no anti-automation clause, open HTTP 200, RTI s.4.

COPYRIGHT

CVE identifiers/product names/severity are facts (EBC v Modak) — cleanest metadata in the group; note text is a Government work → fair dealing; embedded third-party material outside CERT-In's grant.

CONDITIONS

Metadata free; PDF archive internal/unpublished on the standing CERT-In email; do NOT republish embedded third-party material; link out, not iframe.

NCCS (DoT) — Security Certification / ComSec circulars

CONDITIONS

ACCESS

Same NCCS host posture — no robots.txt (404 → free), no anti-automation clause, anonymous GET 200 (HEAD 401 method-level), RTI s.4.

COPYRIGHT

Government work → fair dealing + the express-permissive-licence argument read in the reader's favour; metadata clean.

CONDITIONS

Metadata free; PDF archive internal/unpublished; GET not HEAD; acknowledge NCCS; keep dashboard internal absent NCCS permission; no iframe.

Central Board of Film Certification (statutory Board under MIB) — Orders & Circulars

CONDITIONS

ACCESS

No robots.txt (404 → nothing to breach); no access/reuse restriction in Terms; open GET 200; BUT an F5 BIG-IP ASM WAF is present — any block page is STOP-AND-ALERT, never a retry loop (over-eager retries could manufacture the very 'unauthorised access' complaint the implied-permission defence negates).

COPYRIGHT

Restrictive all-rights-reserved copyright with NO third-party carve-out; UNIQUELY no s.52(1)(q) fallback (administrative Board order — not a court/tribunal order under (q)(iv), not gazette matter under (q)(i)); the archive rests SOLELY on interim ANI fair dealing — the weakest footing in the estate; metadata clean.

CONDITIONS

Metadata included; PDF archive default OFF, strictly internal fair-dealing only (no client-facing/external circulation); attribution; treat any F5 ASM block as stop-and-alert; identifying UA; no iframe; verify against eGazette/MIB before citing.

NCCS

NCCS (DoT) — Latest Updates

CONDITIONS

ACCESS

No robots.txt (nginx 404 → free under RFC 9309); no anti-automation clause; anonymous GET at 200 (HEAD 401 is method-level rejection, not an access control the tracker circumvents); RTI s.4.

COPYRIGHT

Government work → s.52(1)(a) fair dealing PLUS a reasonable express-permissive-licence argument (NCCS twice states 'free of charge'; the permission-required version is contradicted on the same site → contra proferentem favours the reader); metadata clean.

CONDITIONS

Metadata free; PDF archive internal/unpublished; use GET not HEAD; acknowledge NCCS on outward extracts; keep the dashboard internal absent NCCS permission (inbound-hyperlink clause); link out, not iframe.

NCCS (DoT) — Security Assurance Standards circulars

CONDITIONS

ACCESS

Same NCCS host posture — no robots.txt (404 → free), no anti-automation clause, anonymous GET 200 (HEAD 401 method-level), RTI s.4.

COPYRIGHT

Government work → fair dealing + the reasonable express-permissive-licence argument (contra proferentem on NCCS's contradictory terms); metadata clean under EBC v Modak.

CONDITIONS

Metadata free; PDF archive internal/unpublished; GET not HEAD; acknowledge NCCS; keep dashboard internal absent NCCS permission; no iframe.

NCCS (DoT) — Notified ITSARs (binding standards)

CONDITIONS

ACCESS

Same NCCS host posture — no robots.txt (404 → free), no anti-automation clause, anonymous GET 200, RTI s.4 (a binding standard is precisely what a public authority must proactively publish).

COPYRIGHT

Binding technical standard held internally for lawyers is a paradigm s.52(1)(a) fair-dealing use, reinforced by NCCS's permissive reuse wording (contra proferentem); (q)(i) additionally if any ITSAR is gazette-notified; metadata clean.

CONDITIONS

Metadata free; PDF archive of the standard internal/unpublished; acknowledge NCCS; keep dashboard internal absent NCCS permission; no iframe.

TEC / MTCCTE**TEC (DoT) — circulars archive**

CONDITIONS

ACCESS

STRONGEST access — robots.txt empty Disallow = express allow-all; no scraping clause; anonymous GET 200.

COPYRIGHT

THREE contradictory copyright statements including an express implied-licence DENIAL (/legal-disclaimer) — the express-licence route is unavailable; the archive rests SOLELY on s.52(1)(a) fair dealing (a statutory user right a disclaimer cannot contract away); metadata clean under EBC v Modak.

CONDITIONS

Metadata free (zero-copyright core); PDF archive strictly internal fair-dealing only — do NOT treat the permissive /terms-conditions as a licence given the competing restrictive pages; email adic1.tec@gov.in for permission; FALLBACK — run include_metadata_only / disable the PDF archive if the partner wants no fair-dealing reliance against the implied-licence denial; no iframe.

TEC MTCTE — Essential Requirements JSON API

CONDITIONS

ACCESS

Public unauthenticated JSON /get_er_list served at 200 (not behind login; HEAD 403 is method-level; BotDetect CAPTCHA runs ONLY on /login which the tracker never touches); no robots.txt (portal 404 → free); no scraping clause.

COPYRIGHT

The ER payload (equipment names, TEC certificate numbers, dates) is uncopyrightable fact — EBC v Modak, the cleanest case in the group; the optional ER PDF archive is on fair dealing; MTCTE's prior-permission clause is unambiguous (no competing permissive page).

CONDITIONS

Metadata/ER-data free; ER PDF archive internal-only + one courtesy email to TEC to perfect the express permission; GET only, never HEAD; never touch /login or its CAPTCHA; honour the anti-framing rule (no iframe, no ?embed=true).

Central Consumer Protection Authority (DoCA) — orders/directions

CONDITIONS

ACCESS

Point at the MIGRATED host ccpa.doca.gov.in (valid TLS), NOT the brief's doca.gov.in (under maintenance, cert expired 26-Aug-2026, blanket 403); on the live host no robots.txt (404 → free) and no terms exist; open 200, bot-neutral; require valid TLS.

COPYRIGHT

Final penalty orders (s.21 CPA 2019) are quasi-judicial → s.52(1)(q)(iv); administrative safety notices/advisories → s.52(1)(a) fair dealing (weaker fit); metadata clean under EBC v Modak; no site copyright policy to negotiate.

CONDITIONS

Adapter → ccpa.doca.gov.in ONLY; require valid TLS — never scrape over the expired doca.gov.in certificate with verification disabled; treat as unstable/mid-migration (gate on reachability + a row-floor, expect churn); metadata open, PDF archive internal. Partner may reasonably DEFER until the migration settles; include_with_conditions if coverage is wanted now.

MIB**MIB — Acts/Policies/Guidelines listing**

CONDITIONS

ACCESS

robots.txt HTTP 403 (host-general WAF, not bot-targeted) → unavailable under RFC 9309, no rule binds; open HTTP 200 anonymous GET + RTI s.4 = strong implied permission; CAVEAT — the AJAX-only 'Terms & Condition' tab is unretrievable, so absence of an anti-automation clause is not positively established.

COPYRIGHT

Restrictive MIB Copyright Policy (prior permission required) bites the PDF archive, NOT metadata; metadata clean under EBC v Modak; archive on s.52(1)(a) fair dealing (ANI, interim), with the bare-Act (q)(ii) trap flagged.

CONDITIONS

Metadata included freely; PDF archive default OFF, internal/access-controlled, fair-dealing basis, attribution on every item; robots-as-gate + exponential backoff (host drops connections); the engine now sends an honest identifying firm UA with a From-header contact mailbox (no browser spoof); never iframe; verify against eGazette/issuing body before citing; re-check the Terms & Condition tab when reachable; fp/fingerprint.html present — if MIB hardens its WAF against an honest UA, pause and seek written permission.

MIB — Advisories to broadcasters/OTT

CONDITIONS

ACCESS

Same MIB host posture — robots 403 (host-general) → no rule binds; open 200 + RTI s.4 = strong implied permission; Terms & Condition tab unverified.

COPYRIGHT

Restrictive MIB Copyright Policy bites the archive, not metadata; advisories are MIB's own communications, generally not gazette matter → s.52(1)(a) fair dealing; metadata clean.

CONDITIONS

Metadata included; PDF archive default OFF, internal-only, fair-dealing basis, attribution; robots-as-gate + backoff; identifying firm UA (drop the spoofed Chrome string); no iframe; note the date column is upload/republish date (data-accuracy, not legal).

MIB — Broadcasting Wing (cable TV, uplinking/downlinking, CRS)

CONDITIONS

ACCESS

Same MIB host posture — robots 403 → no rule binds; open 200 + RTI s.4; transient connection drops are live (seen this run), so exponential backoff is load-bearing for the s.43(e)/s.66 good-faith posture.

COPYRIGHT

Restrictive MIB policy bites the archive, not metadata; gazette-notified broadcasting instruments → s.52(1)(q)(i) DOCUMENT-BY-DOCUMENT (attaches to the gazette matter, not MIB's site copy); host-wide fallback is fair dealing; metadata clean.

CONDITIONS

Metadata included; PDF archive default OFF — prefer/annotate the (q)(i) basis per gazette-notified instrument, else fair dealing, internal-only; attribution; robots-as-gate + backoff; identifying firm UA; no iframe.

MIB — Orders & Notices

CONDITIONS

ACCESS

Same MIB host posture — robots 403 → no rule binds; open 200 + RTI s.4; page intermittently times out, so retries-with-backoff are required.

COPYRIGHT

Restrictive MIB policy bites the archive, not metadata; administrative Government works — some binding orders may be gazetted ((q)(i) per-document), host-wide basis is fair dealing; NOT court/tribunal orders so (q)(iv) does not apply; metadata clean.

CONDITIONS

Metadata included; PDF archive default OFF, internal-only, fair-dealing basis (or (q)(i) for any gazetted order); attribution; robots-as-gate + backoff; identifying firm UA; no iframe; verify against issuing body before citing.

MIB — Other Communications (advisories, OMs, court-order circulations)

CONDITIONS

ACCESS

Same MIB host posture — robots 403 → no rule binds; open 200 + RTI s.4; Terms & Condition tab unverified.

COPYRIGHT

MIB's own advisories/OMs on fair dealing (restrictive policy bites the archive, not metadata); DISTINCT limb — circulated court/tribunal orders are separately permitted under s.52(1)(q)(iv), document-by-document; metadata clean.

CONDITIONS

Metadata included; PDF archive default OFF — MIB material on fair dealing, circulated court orders additionally on (q)(iv); internal-only; attribution; robots-as-gate + backoff; identifying firm UA; no iframe.

MIB — Digital Media Wing (IT Rules 2021 Part III, OTT advisories)

CONDITIONS

ACCESS

Same MIB host posture — robots 403 → no rule binds; open 200 + RTI s.4; signals lane (most rows are PIB press releases typed as advisories, already carried by mib_advisories with identical hrefs).

COPYRIGHT

Restrictive MIB policy bites the archive, not metadata; gazette-notified IT Rules Part III amendments → s.52(1)(q)(i) per-document; press-release-style advisories/HTML → fair dealing; metadata clean.

CONDITIONS

Metadata included but expect heavy overlap with mib_advisories/PIB — dedupe via sightings; PDF archive default OFF (low incremental value, main risk is noise not liability); gazette Part III rules on (q)(i), advisories on fair dealing; identifying firm UA; backoff; no iframe.

Press Registrar General of India (statutory office under MIB)

CONDITIONS

ACCESS

robots.txt present and EXPRESSLY allows our document-shelf path (Disallows confined to Drupal internals + /search/); deep-linking expressly permitted — express permission, the cleanest access of the MIB-adjacent group; ONE LIVE RULE — never harvest via /search/; use TLS-tolerant fetch for the intermittent broken chain.

COPYRIGHT

CONFLICTING terms — permissive /terms-conditions (express free-reproduction licence) vs restrictive /website-policy; contra proferentem favours the reader → rely on the express licence + fair-dealing backstop + (q)(i) for any gazetted PDF; strongest reproduction posture of the group; metadata clean.

CONDITIONS

Metadata AND PDF archive defensible under the express licence; prominent PRGI attribution on any issued material; NEVER harvest via /search/ (live Disallow); never iframe; a one-line courtesy email to PRGI's Web Information Manager resolves the copyright conflict + link-notification ask; expect logging (monitoring consent); correct the tracker's PRGI path inventory (it currently reuses MIB paths that 404 here).

IN-SPACe

IN-SPACe (Dept of Space) — ServiceNow publications API

CONDITIONS

ACCESS

robots.txt served (200) as a malformed allow-list missing 'Disallow: /'; strict RFC read permits the API path (only Disallow is the password-reset endpoint) but the internal /api/now/sp/page path is not on the enumerated allow-list → AMBIGUOUS, curable at zero cost by switching to the documented /inspace?id=inspace_publications portal URL; no terms exist; implied permission + RTI s.4.

COPYRIGHT

Government work under the EXPRESS permissive IN-SPACe/DoS licence (free reproduction, no commercial/research limit — broader than fair dealing); guidelines/policy papers (not gazette matter) so the express licence is operative, fair dealing backstop; metadata clean under EBC v Modak.

CONDITIONS

Prefer the documented portal URL over the internal API (align with the robots allow-list intent) — verify the publications data remains extractable that way; flag any third-party-copyright-marked document (outside the licence); keep archive internal; acknowledge IN-SPACe/DoS if issued outward; validate Content-Type/body (host serves 200 ServiceNow login stubs at policy paths); no iframe.

TDSAT

TDSAT — administrative Registry noticeboard (signals lane)

METADATA ONLY

ACCESS

Same clean TDSAT host — no robots.txt (404 → free), no terms, open 200 + RTI s.4.

COPYRIGHT

Administrative Registry notices are NOT 'judgments/orders', so s.52(1)(q)(iv) does NOT apply; metadata clean under EBC v Modak (most notices too trivial for copyright); any hand-lifted Practice Direction PDF rests on s.52(1)(a) fair dealing, not q(iv).

CONDITIONS

Keep metadata-only (signals lane); do NOT extend the tdsat_orders q(iv) footing to notices; for a substantive Practice Direction, lift by hand and document fair dealing (and (q)(i) if gazette-published); identifying UA; link out.

Courts

Supreme Court of India — Latest Orders

CONDITIONS

ACCESS

Repoint from the dead main.sci.gov.in (NXDOMAIN) to www.sci.gov.in; robots allows /latest-orders/ (only /wp-admin/ disallowed); no scraping clause; open 200 + RTI s.4; confine to the CAPTCHA-free Latest Orders listing — NEVER the siwp_captcha case-number search, and never bypass a CAPTCHA.

COPYRIGHT

s.52(1)(q)(iv) covers reproduction of judgments/orders (SCI Copyright Policy permits reproduction on acknowledgement, no prior-permission gate, no prohibition); EBC v Modak (order text no copyright) + fair dealing; metadata clean.

CONDITIONS

Repoint to www.sci.gov.in; scrape only the CAPTCHA-free /latest-orders/ + homepage block, never the search endpoints or a CAPTCHA; PDF archive private/internal, acknowledge 'Supreme Court of India'; honour order-specific reporting/anonymisation restrictions (POCSO, in-camera, matrimonial) — the q(iv) 'unless prohibited' limb. UA: this host's Akamai edge 403s crawler-signature tokens, so per Principle 2 the engine uses its honest identified-agent UA 'Mozilla/5.0 (compatible; TMTRegulatoryRadar/2.0; Trilegal internal regulatory monitoring)' (contact in the From header) — served HTTP 200, no browser spoof.

High Court of Delhi — Latest Judgments

CONDITIONS

ACCESS

No robots.txt (genuine 404 → free under RFC 9309); no scraping clause; open 200 + RTI s.4; use only the CAPTCHA-free Latest Judgments feed / direct /files PDFs — NEVER the CAPTCHA-gated case-status/party-name search.

COPYRIGHT

s.52(1)(q)(iv) covers judgments/orders; the MODIFIED prior-permission Copyright Policy cannot contract a user out of the statutory right and bites only external republication of site material; metadata clean under EBC v Modak; fair dealing backstop.

CONDITIONS

PDF archive private/internal, no external republication of DHC site material; confine q(iv) reliance to judgments/orders (admin notices rest on fair dealing + EBC metadata); acknowledge 'High Court of Delhi'; CAPTCHA-free feed only; honour order-specific reporting restrictions.

CCI

Competition Commission of India — antitrust & combination orders

CONDITIONS

ACCESS

robots.txt allows our order paths (the only Disallows target three /images/ consultation dirs we never touch); no anti-automation clause; open 200, bot-neutral (verified); RTI s.4.

COPYRIGHT

s.27/s.31 orders are quasi-judicial → s.52(1)(q)(iv) covers full reproduction (no prohibition stamped); metadata clean under EBC v Modak; the restrictive NIC prior-permission clause cannot displace the statutory right and bites only onward external publication.

CONDITIONS

Confine collection to the order paths — NEVER fetch the three robots-Disallowed /images/ consultation directories; ~1 req/s GET consuming the /antitrust/orders/list JSON; metadata open, PDF archive internal/unpublished; no external republication of order text without the acknowledgement/permission email; no iframe.

DPIIT

DPIIT (Ministry of Commerce & Industry) — FDI Press Notes

INCLUDE

ACCESS

robots.txt 'User-agent: * / Allow: /' — EXPRESS permission for every path (strongest of the additions); Terms are a bare disclaimer with no anti-automation clause; consume the public unauthenticated on-host wp-json CMS API, not the empty SPA shell; RTI s.4.

COPYRIGHT

FDI Press Notes are gazetted as a class → s.52(1)(q)(i) covers the whole PDF; where a note takes effect via the gazetted FEMA/RBI notification instead, s.52(1)(a) fair dealing backstops; metadata clean under EBC v Modak.

CONDITIONS

Consume the wp-json routes (pin + monitor — buildId/endpoints churn), ~1 req/s; metadata open, PDF archive internal; acknowledge DPIIT/GoI on any outward quote; no iframe. UA: this host's Akamai edge 403s crawler-signature tokens, so per Principle 2 the engine uses its honest identified-agent UA 'Mozilla/5.0 (compatible; TMTRegulatoryRadar/2.0; Trilegal internal regulatory monitoring)' (contact in the From header) — served HTTP 200, no browser spoof.

Advertising Standards Co

Advertising Standards Council of India — PRIVATE self-regulatory non-profit

METADATA ONLY

ACCESS

robots allows our path under both readings of a malformed file + an affirmative 'index, follow' meta = near-express permission; NO binding terms exist (only an unfinished draft) — the cleanest access of the group, BUT the RTI s.4 booster is UNAVAILABLE because ASCI is private.

COPYRIGHT

PRIVATE, all-rights-reserved: NONE of the s.52(1)(q) limbs is available (not gazette/Act/legislature-report/judgment) and there is NO GoI licence; metadata is clean under EBC v Modak even against a private rightsholder, but a PDF archive would rest solely on interim ANI fair dealing — so METADATA-ONLY is the only safe posture.

CONDITIONS

Track METADATA ONLY; do NOT enable the PDF archive for ASCI (the one private body in the estate); never let ASCI advisory text/substantive extracts reach client-facing or public output without ASCI permission; identifying UA; no iframe; re-check ASCI's terms periodically (only a draft exists); most rows are republished copies of other regulators' documents better tracked at their primary venue.

Telecom Disputes Settle

Telecom Disputes Settlement & Appellate Tribunal — daily orders / judgments

INCLUDE

ACCESS

No robots.txt (404 → free); no terms/copyright policy of any kind on the host; the public POST search form is cookieless/session-less/CSRF-free at 200; open-justice + RTI s.4 — one of the cleanest access positions in the estate.

COPYRIGHT

s.52(1)(q)(iv) — reproduction of any judgment/order of a tribunal is permitted (no prohibition posted), covering the full-text PDF archive; EBC v Modak (order text carries no copyright) + fair dealing stack behind; metadata clean.

CONDITIONS

Standing monitoring item — re-assess the archive if TDSAT ever posts a reproduction prohibition (the q(iv) proviso); short date window, identifying UA, ~1 req/s; no login; link out, not iframe.

National Company Law App

National Company Law Appellate Tribunal

INCLUDE

ACCESS

robots.txt allows our paths (Disallows confined to Drupal internals/admin/auth); no scraping clause; open 200 + RTI s.4; CAPTCHA-free listings (the PDF fetch uses the site's own token-POST — a Laravel CSRF token, not a CAPTCHA or auth wall).

COPYRIGHT

Three independent footings — NCLAT's STANDARD PERMISSIVE GoI licence (express, no prior-permission gate, covers the PDF archive) + s.52(1)(q)(iv) for orders/judgments + fair dealing; metadata clean; the cleanest of the judgment hosts.

CONDITIONS

Acknowledge 'NCLAT' as source on onward use (licence condition); PDF archive private; rely on the express licence + fair dealing (NOT q(iv)) for any administrative circular/notice scraped; honour order-specific reporting restrictions; no iframe. NOTE: legally cleared but NOT yet collected — registered as a PLANNED source (see coverage page). NCLAT's public listing is frozen at 2021; recent orders need a date-filter POST driver (egazette-style) before this source goes live.

EXCLUDED — NOT COLLECTED

Unique Identification Authority of India (uidai.gov.in own portal) — REFUSED access — UIDAI's own portal publishes robots.txt 'Disallow: /' (blanket exclusion of all agents). Not collected directly; UIDAI instruments are instead recovered lawfully from their authoritative statutory source via the e-Gazette (gazette_communications), where s.52(1)(q)(i) and open access both hold.

Department of Telecommunications (eservices.dot.gov.in) — REFUSED access — the eservices.dot.gov.in Terms of Use expressly name 'web scraping' as an unauthorised activity (a live, on-point anti-scraping term, unlike the empty policy boilerplate elsewhere). Not collected directly; DoT instruments are instead recovered via the e-Gazette (gazette_communications), resting reproduction on statute rather than on that site's terms.

THE LIMITS OF THIS ANALYSIS

This is a compliance analysis of publicly stated terms and the applicable statute as at 27 August 2026, prepared to inform the firm's own posture; it is not a legal opinion and has not been settled by counsel. Two questions are genuinely unsettled in Indian law and are flagged rather than smoothed over: (a) no court has ruled on whether scraping publicly available data is 'without permission' under s.43 of the IT Act; and (b) the enforceability of browsewrap website terms absent assent is unresolved. The posture rests on express or implied permission plus the absence of any recoverable loss, and on the s.52 permitted-act and fair-dealing grounds — the latter, as construed in ANI Media v OpenAI, being an interim prima facie ruling. Every instrument must still be verified against the gazette text before client advice.
